

Make the Call that could Save your Life.

Since the introduction of prostate-specific antigen (PSA) testing, prostate cancer is being detected earlier and treated more effectively. All men age 45 and older should undergo both a PSA blood test AND a digital rectal examination annually to protect their health. If you're an African American man, or have a family history of prostate cancer, testing should begin at age 40.

The Western Pennsylvania Hospital will
provide **FREE prostate cancer screenings:**

Tuesday, September 16, 2008 at 2 p.m.

Call 412-578-7131 today to schedule your appointment.
